

Get ready for REACH now!

The REACH Orphan Substances Consortium bvba (ROSC) provides all services related to the EU REACH regulation, being it registration, evaluation, authorisation or restriction. We work on metals, organics and inorganics under one over-arching organization in a step-wise approach.

Make your REACH 2018 inventory!

- Do you still have substances to register and what would be the registration cost for those substances?
- Which of your substances are orphans (i.e. need to be registered, but nobody seems to have started working on them)?
- Are there other players on the market that would be interested in sharing the REACH registration costs with you?
- Which of your substances are under regulatory pressure and risk disappearing from the market in the near future (effect of authorisations, restrictions)?
- Are your safety data sheets REACH compliant?
- Do you need help with consortium formation?

There are still hundreds of substances to be REACH registered. Don't wait till the labs run out of capacity or the consultants run out of time.

Take informed decisions!

Get the answers to the above questions for a low price and make informed decisions! As a result, you can spread your resources from now till May 2018 and keep more substances on the EU market if you want to.

Everybody can take the first step!

Having an organization behind you to help you through all hurdles, means everybody can take the first step without any commitment to become the lead registrant.

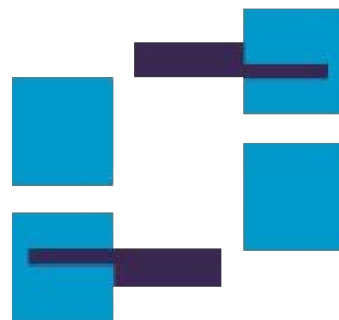

"Karine provides excellent service as Secretary General of ROSC. She exhibits great communication skills and project management skills, is spot-on, dedicated to her clients and absolutely reliable. It is a great pleasure working with such professional service provider."

*- Bernd Friede
Elkem, Product Stewardship
Manager and ROSC client*
